

ONSPEED
WAKE UP YOUR INTERNET

Press release
For immediate release
8th August 2004

C.S.C. - The unique technology which makes OnSpeed the superior internet accelerator in the market

OnSpeed, a unique internet acceleration software, was first launched early this year and has since had an unprecedented uptake, with more than 150.000 users. OnSpeed is available anywhere in the country and can be set up in a matter of minutes, with no need to change ISP or phone company, nor any requirement to buy or install new hardware or wait in for engineers. OnSpeed is available at an annual payment of £24.99.

Using a 9 patent approved compression technology, OnSpeed instantly enables any PC or Mac user to browse and use email at near broadband speeds. OnSpeed is not just limited to narrowband connections, but also speeds up Broadband and GPRS mobile phone connections.

The core of the technology, content-sensitive compression (CSC), was originally developed by the US military and subsequently transformed into a consumer facing product by British technology company OnSpeed. Nine technology patents back the product and OnSpeed's breakthrough is in its ability to take every separate element of a web page or email and compress it at source using a plethora of compression algorithms that are optimised for each data element. This is 70%-80% more effective than using a standard compression algorithm such as WinZip.

OnSpeed updated its software in May this year, when it released their advanced version with a faster slicker interface and added compression algorithms that speed up flash animation. The new client is compatible with Internet Explorer, MYIE, Firefox, Safari and Netscape Communicator, as well as Opera and Mozilla. There will be increased functionality with a pop up and advertising blocker that can be enabled on demand. The size of the software has also been decreased from 3 to 1 megabyte making this client yet faster to download.

You can currently purchase OnSpeed from our secure online shop at www.onspeed.com
